Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

CRUSTAL ANISOTROPY AND SHEAR WAVE VELOCITY STRUCTURE

LAP Lambert Academic Publishing Okt 2013, 2013. Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware
- Although the history of crustal growth can be traced back to at least 3.8Ga, the record is incomplete and several issues regarding its structure, material properties and evolution remain partially resolved. South Indian shield is a conglomerate of several crustal blocks formed due to the geodynamic processes that operated during Archean to Neo-proterozoic age and provide an ideal geological lab to validate models of crustal evolution and accretion. The primary goal of the work is to understand the nature of the crustal fabrics of different geological units of South India and the tectonic processes responsible for such a fabric by studying the shear wave velocity structure and percentage of S-anisotropy in the crust. 100 pp. Englisch.
