Mathematical Foundations of Computer Science 1984

Filesize: 2.7 MB

Reviews

This pdf is so gripping and intriguing. I could comprehended almost everything using this composed e ebook. You are going to like just how the article writer create this ebook. (Miss Dakota Zulauf)

MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE 1984

To read **Mathematical Foundations of Computer Science 1984** eBook, remember to refer to the link under and download the document or get access to additional information that are in conjuction with MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE 1984 ebook.

Springer Aug 1984, 1984. Taschenbuch. Book Condition: Neu. 235x155x32 mm. This item is printed on demand -Print on Demand Titel. Neuware - Separating, strongly separating, and collapsing relativized complexity classes.- Complexity of quantifier elimination in the theory of algebraically closed fields.- Systolic automata power, characterizations, nonhomogeneity.- A note on unique decipherability.- Outline of an algebraic language theory.- Thue systems and the Church-Rosser property.- Limits, higher type computability and typefree languages.- Traces, histories, graphs: Instances of a process monoid.- Recent results on automata and infinite words.- VLSI algorithms and architectures.- Decidability of monadic theories.- On the Ehrenfeucht conjecture on test sets and its dual version.- Sparse oracles, lowness, and highness.- Computability of probabilistic parameters for some classes of formal languages.- A truely morphic characterization of recursively enumerable sets.- On the Herbrand Kleene universe for nondeterministic computations.- An investigation of controls for concurrent systems by abstract control languages.- On generalized words of Thue-Morse.- Nondeterminism is essential for two-way counter machines.- Weak and strong fairness in CCS.- On the complexity of inductive inference.- Monotone edge sequences in line arrangements and applications.- Manysorted temporal logic for multi-processes systems.- Process logics: two decidability results.- On searching of special classes of mazes and finite embedded graphs.- The power of the future perfect in program logics.-Hierarchy of reversal and zerotesting bounded multicounter machines.- On the power of alternation in finite automata.- The equivalence problem and correctness formulas for a simple class of programs.- Lower bounds for polygon simplicity testing and other problems.- A uniform independence of invariant sentences.- On the equivalence of compositions of morphisms and inverse morphisms on regular languages.- Some connections between presentability of complexity classes and the power of formal systems of reasoning.- Finding a maximum flow in /s,t/-planar network in linear expected time.- Nondeterministic logspace reductions.-Factoring multivariate polynomials over...
